## Field Definitions

The following is a catalog of fields used to define the application and session protocol messages.

Please refer to Volume 1 “Data Types” section for the definition and format of values within the “Format” column as well. Note that Tags themselves are of data type *TagNum*.

<i>Tag</i>	<i>FieldName</i>	<i>Data Type</i>	<i>Description</i>	<i>FIXMLName</i>
1	Account	String	Account mnemonic as agreed between buy and sell sides, e.g. broker and institution or investor/intermediary and fund manager.	
2	AdvId	String	Unique identifier of advertisement message. (Prior to FIX 4.1 this field was of type int)

5	AdvTransType	String	Identifies advertisement message transaction type  Valid values: N - New C - Cancel R - Replace	
6	AvgPx	Price	Calculated average price of all fills on this order.  For Fixed Income trades AvgPx is always	

			expressed as percent-of-par, regardless of the PriceType (423) of LastPx (31). I.e., AvgPx will contain an average of percent-of-par values (see LastParPx (669)) for issues traded in Yield, Spread or Discount.	
7	BeginSeqNo	SeqNum	Message sequence number of first message in range to be resent	
8	BeginString	String	Identifies beginning of new message and protocol version. ALWAYS FIRST FIELD IN MESSAGE. (Always unencrypted)  Valid values: FIXT.1.1	
9	BodyLength	Length	Message length, in bytes, forward to the CheckSum field. ALWAYS SECOND FIELD IN MESSAGE. (Always unencrypted)	
10	CheckSum	String	Three byte, simple checksum (see Volume 2: "Checksum Calculation" for description). ALWAYS LAST FIELD IN MESSAGE; i.e. serves, with the trailing <SOH>, as the end-of-message delimiter. Always defined as three characters. (Always unencrypted)	
11	ClOrdID	String	Unique identifier for Order as assigned by the buy-side (institution, broker, intermediary etc.) (identified by SenderCompID (49) or OnBehalfOfCompID (5) as appropriate). Uniqueness must be guaranteed within a single trading day. Firms, particularly those which electronically submit multi-day orders, trade globally or throughout market close periods, should ensure uniqueness across days, for example by embedding a date within the ClOrdID field.	
12	Commission	Amt	Commission. Note if CommType (13) is percentage, Commission of 5% should be represented as .05.	
13	CommType	char	Commission type  Valid values:

16	EndSeqNo	SeqNum	<p>Message sequence number of last message in range to be resent. If request is for a single message BeginSeqNo (7) = EndSeqNo. If request is for all messages subsequent to a particular message, EndSeqNo = "0" (representing infinity).</p>	
17	ExecID	String	<p>Unique identifier of execution message as assigned by sell-side (broker, exchange, ECN) (will be 0 (zero) for ExecType (50) =I (Order Status)).</p> <p>Uniqueness must be guaranteed within a single trading day or the life of a multi-day order. Firms which accept multi-day orders should consider embedding a date within the ExecID field to assure uniqueness across days.</p> <p>(Prior to FIX 4.1 this field was of type int)</p>

### Valid Currency Codes

Currency codes used in FIX are those defined in ISO 4217 standard. To obtain the current valid list please contact the ISO 4217 secretariat at +44-181-996-9000 or on World Wide Web at:

<http://www.bsi.org.uk/bsi/products/standards/products/currency.xhtml>

Another online reference at the time of this writing is: <http://www.xe.com/iso4217.htm>

*Note: Prices defined in FIX messages should be made consistent with the currency code used. In some markets, prices are quoted as multiples or fractions of the currency, FIX messages should normalize the amount to coincide with the indicated code (e.g. UK securities are quoted in pence but must be represented in FIX messages as pounds).*

### FIX Fields Based Upon Other Standards

Values for many of the fields within the FIX Protocol specification are based upon several ISO standards. See <http://www.iso.ch> for the official ISO website.

## Appendix 6-C

### Exchange Codes - ISO 10383 Market Identifier Code (MIC)

As of FIX 4.3, Exchange Codes used in FIX are those defined in ISO 10383 standard: Market Identifier Code (MIC). The cross-reference list below is a subset of ISO 10383 values as of the time of this publication. It is provided to facilitate the transition from the Reuters exchange suffix codes which versions of FIX prior to FIX 4.2 were based upon. The official standard and set of values are maintained by the ISO 10383 standard and any discrepancies below should be considered typographical errors using the ISO 10383 standard as the correct set of values. These values are maintained by ISO 10383 secretariat (see "Appendix 6-B") and as of the time of this publication the website link to view current list of MIC values is: <http://www.iso15022.org/MIC/homepageMIC.htm>

Note that "Old FIX 4.2" values which are underlined represent "numeric codes" assigned by the FIX organization in lieu of a valid Reuters exchange suffix. Such values which have a valid MIC value should use the MIC value. Markets without a MIC value should apply to the ISO 10383 Registration Authority (SWIFT) for an appropriate value. The FIX organization will maintain numeric values for required market identifiers which are unable to establish a MIC value for some reason.

**Disclaimer:** Please refer to the current ISO 10383 standard for the complete list. The following list is a **subset** and designed primarily to support cross-referencing mapping from FIX versions <= 4.2 to FIX versions >= 4.3 (when the FIX specification standard changed from Reuters exchange suffix to ISO 10383 MIC code).

## Appendix 6-D

### CFIcode Usage - ISO 10962 Classification of Financial Instruments (CFI code)

As of FIX 4.3, the CFIcode field was added to the FIX Protocol in an attempt to provide a standards-based source of security type values by using values defined in ISO 10962 standard: Classification of Financial Instruments (CFI code). Prior to FIX 4.3, the SecurityType field was used to identify security types and was based upon a set of values published by ISITC (International Securities Association for Institutional Trade Communication) which ISITC no longer maintains.

It is recommended that CFIcode be used instead of SecurityType for non-Fixed Income instruments as it is based upon an ISO standard and supports non-Fixed Income products in a manner consistent with the needs of FIX Protocol users. As of FIX 4.3, the SecurityType field was expanded and re-organized to support the requirements of Fixed Income products for FIX Protocol users, as the present ISO 10962 standard did not meet those needs.

ISO 10962 is maintained by ANNA (Association of National Numbering Agencies) acting as Registration Authority. [See "Appendix 6-B FIX Fields Based Upon Other Standards"](#). See also the Product (460) and SecurityType (167) fields.

A subset of ISO 10962 values applicable to FIX usage are identified below. The official standard and set of possible values are maintained by the ISO 10962 standard and any discrepancies below should be considered typographical errors using the ISO 10962 standard as the correct set of values. To obtain the ISO 10962 standard, please contact the ISO 10962 secretariat (see "Appendix 6-B") and/or visit the ISO website at <http://www.iso.ch>

The ISO 10962 standard defines a 6 character code in which each character's position value carries a special significance (attribute) and set of values. Note that "X" represents an unspecified or unknown attribute, thus it is not always necessary to specify every attribute (character position value).

#### High-level subset of possible values applicable to FIX usage:

*Note: Corresponding FIX 4.2 SecurityType field value is identified within [ ]*

ESXXXX = Equity Common Shares [CS]

EMXXXX = Equity Miscellaneous or Other (e.g. Exchange Traded Funds (ETFs), etc.) [n/a]

EPXXXX = Equity Preferred Shares [PS]

EUXXXX = Equity Units (unit trusts/mutual funds/OPCVM/OICVM) [MF]

DXXXXX = Debt (Fixed Income) [various]

 MRRXXX = Misc, Referential Instrument, Interest Rate [n/a]  
 OCXXXX = Option - Call [OPT]  
 OPXXXX = Option - Put [OPT]  
 RWXXXX = Right Warrant [WAR]  
 RWXCXX = Covered Warrant [n/a]  
 XXXXXX = [NONE and ?]

Note that "X" represents an unspecified or unknown attribute and many of the values above containing "X" can be further subdefined according to the CFI standard (e.g. Voting rights are the third character of Equity Common Shares).

### Deprecated (Phased-out) Features and Supported Approach

Certain features of the FIX Protocol that were implemented in earlier versions of the FIX Protocol specification, have been replaced by a different approach. Such features have been labeled as "Deprecated" throughout the FIX Specification document. This means that feature is being phased out, systems that implement the FIX Protocol should be adjusted to use the new, supported approach, and the next version of the FIX Specification will remove the feature altogether.

The rationale behind deprecating a feature is based upon either:

- Actual use and implementation of the feature identified major shortcomings necessitating a re-design.
- Additional business requirements have been identified which the feature is unable to expand and properly support in its present form.

**The new, supported approach for each deprecated feature is identified below:**

#### **1. Deprecated Field: TotalAccruedInterestAmt (tag 540) [deprecated in FIX 4.4]**

The TotalAccruedInterestAmt field introduced in FIX 4.3 has been replaced by the FIX 4.4-introduced AllocAccruedInterestAmt (742) field for the allocation-level value. Note that AccruedInterestAmt (tag 159) represents the block-level (total). Affects Allocation messaging.

#### **2. Deprecated the use of SettlCurrAmt (119) and SettlCurrency (120) fields within Allocation messaging NoAllocs repeating group [deprecated in FIX 4.4]**

AllocSettlCurrAmt (737) and AllocSettlCurrency (736) fields should be used instead of SettlCurrAmt (119) and SettlCurrency (120) within the NoAllocs repeating group. Affects Allocation messaging.

#### **3. Deprecated Instrument-affiliated "RedemptionDate" Fields: RedemptionDate (240), UnderlyingRedemptionDate (247), and LegRedemptionDate (254). [deprecated in FIX 4.4]**

Deprecated RedemptionDate (240) from <Instrument>, UnderlyingRedemptionDate (247) from <UnderlyingInstrument>, and LegRedemptionDate (254) from <InstrumentLeg>. YieldRedemptionDate (696) in <YieldData> component block should be used instead.

#### 4. Deprecated usage of the Settlement Instruction message where used to refer to an allocation message [deprecated in FIX 4.4]

The main body of the Settlement Instruction (now a component block) has been added to the allocation and confirmation messages (Allocation Instruction, Allocation Report and Confirmation).

#### 5. Deprecated various FIX 4.3-introduced "Repo" Fields [deprecated in FIX 4.4]

Deprecated the following fields from <Instrument>, <UnderlyingInstrument>, and <LegInstrument> component blocks: RepoCollateralSecurityType (239), RepurchaseTerm (226), RepurchaseRate (227), UnderlyingRepoCollateralSecurityType (243), UnderlyingRepurchaseTerm (244), UnderlyingRepurchaseRate (245), LegRepoCollateralSecurityType (250), LegRepurchaseTerm (251), LegRepurchaseRate (252). The RepoCollateralSecurityType (239) field is satisfied with UnderlyingSecurityType (310), RepurchaseTerm (226) by TerminationType (788), RepurchaseRate (227) by Price (44). The corresponding Underlying... and Leg... equivalents have no meaning. FIX 4.4 introduced significant enhancements to support Product="Financing" (e.g. Repos).

#### 6. Deprecated "UST" and "USTB" values from the SecurityType (tag 167) field [deprecated in FIX 4.4]

Mapping of the deprecated SecurityType field's values is as follows:

Deprecated Value within SecurityType (167) field		SecurityType (167)	
UST	US Treasury Note	TNOTE	US Treasury Note
USTB	US Treasury Bill	TBILL	US Treasury Bill

#### 7. Deprecated LegQty (tag 687) from certain message types [deprecated in FIX 5.0]

Deprecated LegQty (tag 687) from the following message types: QuoteRequest, QuoteResponse, QuoteRequestReject, Quote, QuoteStatusReport, New Order - Multileg, and Execution Report.

The LegOrderQty (tag 685) should be used instead to convey the order quantity at the leg level. In an Execution Report the LegOrderQty is used to echo back the order quantity from the order submission.

## **8. Deprecated TargetStrategyParameters (848) and ParticipationRate (849) [deprecated in FIX 5.0]**

Deprecated TargetStrategyParameters (848) and ParticipationRate (849) from the following message types: New Order - Single, New Order - Multileg, Order Cancel/Replace Request, Multileg Order Cancel/Replace Request, Execution Report, New Order - Cross, Cross Order Cancel/Replace Request, New Order - List

The NoStrategyParameters repeating group is used instead to convey target strategy parameters and values. See Equities section of Volume 7 for additional usage.

## **9. Deprecated SecondaryTradeReportID (818) and SecondaryTradeReportRefID (881) [deprecated in FIX 5.0]**

Deprecated SecondaryTradeReportID (818) and SecondaryTradeReportRefID (881) from the Trade Capture Report messages. These fields are no longer used.

## **10. Deprecated MaxFloor (111) and MaxShow (210) [deprecated in FIX 5.0]**

Deprecated MaxFloor (111) and MaxShow (210) from messages. They are replaced with DisplayQty and SecondaryDisplayQty, respectively, in the DisplayInstruction component block.

## **11. Deprecated OddLot (575) [deprecated in FIX 5.0]**

Deprecated OddLot (575) and replaced its usage with LotType (1093) which allows for identifying whether the lot size is an odd lot, round lot, or block lot.

## **12. Deprecated enum values from ExecInst (18) [deprecated in FIX 5.0]**

The following enum values are deprecated from ExecInst (18):

- L - Last Peg
- M - Mid price Peg
- O - Opening peg
- P - Market Peg
- R - Primary peg
- T - Fixed peg to local best bid/offer at time of order
- W - Peg to VWAP
- a - Trailing Stop Peg
- d - Peg to limit

Its usage is replaced by the field PegPriceType (1094) in the PegInstructions component block. The values are:

- 1 - Last peg
- 2 - mid-price peg
- 3 - opening peg
- 4 - market peg
- 5 - primary peg (primary market - buy at bid or sell at offer)
- 6 - Fixed peg to local best bid or offer at time of order
- 7 - Peg to VWAP
- 8 - Trailing Stop peg
- 9 - Peg to limit price

The following table shows the deprecated enumeration values from ExecInst and the mapping to PegPriceType (1094), the new supported functionality for identifying the type of pegging for the order.

<b>OrdType (retained)</b>	<b>ExecInst (deprecated values)</b>	<b>PegPriceType (added tag)</b>
P = Pegged	L = Last peg (last sale)	1 = Last peg (last sale)
P = Pegged	M = Mid-price peg (midprice of inside quote)	2 = Mid-price peg (midprice of inside quote)
P = Pegged	O = Opening peg	3 = Opening peg
P = Pegged	P = Market peg	4 = Market peg
P = Pegged	R = Primary peg (primary market - buy at bid/sell at offer)	5 = Primary peg (primary market - buy at bid/sell at offer)
P = Pegged	W = Peg to VWAP	7 = Peg to VWAP
P = Pegged	a = Trailing Stop Peg	8 = Trailing Stop Peg
P = Pegged	d = Peg to Limit Price	9 = Peg to Limit Price

### **13. Deprecated OrderQty2 (192), SettlDate2 (193), Price2 (640), LastForwardPoints2 (641), BidForwardPoints2 (642), and OfferForwardPoints2 (643) [deprecated in FIX 5.0]**

The following fields are being deprecated from use as FX support for FX Swaps will now use the New Order - Multileg and other existing multileg components: OrderQty2 (192), SettlDate2 (193), Price2 (640), LastForwardPoints2 (641), BidForwardPoints2 (642), and OfferForwardPoints2 (643)

**14. Deprecated QuoteType (537) from QuoteResponse message only [deprecated in FIX 5.0]**

The QuoteType (537) is only deprecated from the QuoteResponse message as it was a cut/paste error when the message was created in FIX 4.4 and does not make sense for this message.

**15. Deprecated MDEntryOriginator (282), MDMkt (275) [deprecated in FIX 5.0]**

The following fields are being deprecated from use: MDEntryOriginator (282) and MDMkt (275). Its usage is replaced by corresponding values in PartyRole (452).

**16. Deprecated LocationID (283) and DeskID (284) from Market Data messages only [deprecated in FIX 5.0]**

The following fields are being deprecated only from the Market Data messages: LocationID (283) and DeskID (284). Its usage is replaced by corresponding values in PartyRole (452).

**17. Deprecated LegQty (tag 687) from the specification [deprecated in FIX 5.0 SP1]**

Deprecated LegQty from other messages where it was not depreciated earlier in FIX 5.0 release. These include Execution Report, TradeCaptureReport and TradeCaptureReportAck. For these messages LegQty usage has been replaced by LegLastQty (1418).

**18. Deprecated PublishTrdIndicator (tag 852) from the specification [deprecated in FIX 5.0 SP1]**

Deprecated PublishTrdIndicator from TradeCaptureReport and TradeCaptureReportAck messages. This has been replaced by TradePublishIndicator (1390).

**19. Deprecated OrderID (tag 37) and SecondaryOrderID (tag 198) from OrderMassCancelReport message only [deprecated in FIX 5.0 SP1]**

Deprecated OrderID and SecondaryOrderID from OrderMassCancelReport. For this message the MassActionReportID (1369) is used to identify the message.

**20. Deprecated the fields Signature (89), SecureDataLen (90), SecureData (91), SignatureLength (93) [deprecated in FIXT.1.1]**

**21. Deprecated the following enumerations from SecurityRequestType (321)**

Request ListSecurity Types (2), Request List Security (3)

**22. Deprecated the following enumeration from SecurityResponseType (323)**

### Replaced Features and Supported Approach

Certain features of the FIX Protocol which were implemented in earlier versions of the FIX Protocol specification, have been removed and replaced by a different approach. Such features have been labeled as "Removed" or "Replaced" throughout the FIX Specification document. The removed or replaced feature is no longer supported by this version of the FIX Protocol specification.

These features may or may not have been "Deprecated" in a previous version. Deprecation implies that implementations must support both approaches during the deprecation period. Removing and replacing a features without a deprecation period is based upon:

- Supporting both approaches would result in a high degree of complexity and/or ambiguity.

The rationale behind removing a feature is based upon either:

- Actual use and implementation of the feature identified major shortcomings necessitating a re-design.
- Additional business requirements have been identified which the feature is unable to expand and properly support in its present form.

**The new, supported approach for each removed feature is identified below:**

#### 1. Replaced Field: ExecTransType (tag 20) and values in ExecType and OrdStatus fields [Replaced in FIX 4.3]

The ExecTransType field introduced in FIX 2.7 has been removed and its values have been incorporated within the ExecType field. The ExecType field introduced in FIX 4.1 has had several values removed and a new value to represent the combination of the removed values. The ExecTransType and ExecType fields have effectively been merged into the ExecType field thus the removal of ExecTransType. Each field attempted to designate the type of Execution Report message received in a slightly different way. Both fields were designated as required. This became confusing and should be **simplified by a single, merged field with the following mapping table:**

Removed Value within ExecTransType (20) field		Removed Value within OrdStatus (39) field		Removed Value within ExecType (150) field		ExecType (150)	
0	New						(various)
1	Cancel					H	Trade Cancel

2	Correct					G	Trade Correct
3	Status					H	Order Status
		5	Replaced			5	Replace
				1	Partial Fill	F	Trade
				2	Fill		

## 2. Replaced Fields: MaturityDay (tag 205) and UnderlyingMaturityDay (tag 314) [Replaced in FIX 4.3]

The MaturityDay field (tag 205) introduced in FIX 4.1 has been removed and replaced by the MaturityDate field (tag 541). The MaturityMonthYear field (tag 200) can still be used for standardized derivatives which are typically only referenced by month and year (e.g. S&P futures).

The UnderlyingMaturityDay field (tag 314) introduced in FIX 4.2 has been removed and replaced by the UnderlyingMaturityDate field (tag 542). The UnderlyingMaturityMonthYear field (tag 313) can still be used for standardized derivatives which are typically only referenced by month and year (e.g. S&P futures).

## 3. Replaced Fields: ExecBroker (tag 76), BrokerOfCredit (tag 92), ClientID (tag 109), ClearingFirm (tag 439), ClearingAccount (tag 440), and SettlLocation (tag 166) [Replaced in FIX 4.3]

The ExecBroker (tag 76), BrokerOfCredit (tag 92), ClientID (tag 109), ClearingFirm (tag 439), ClearingAccount (tag 440), and SettlLocation (tag 166) fields introduced prior to FIX 4.3 have been removed and the equivalent values can now be specified via PartyRole, PartyID, and PartyIDSource. In addition this <Parties> "component block" (see Volume 1: "Common Components of Application Messages") is flexible enough to allow new "roles" or types of firm identification to be specified without a corresponding increase in the number of FIX fields. **All of the old field values can be specified via the following mapping table:**

Removed Field	PartyRole (452) (also see Volume 1: "Glossary")		PartyID (448)	PartyIDSource (447)		PartySubID (523)
ExecBroker (tag 76)	1	Executing Broker	(value)		(various)	
BrokerOfCredit (tag 92)	2	Broker Of Credit	(value)		(various)	
ClientID (tag 109)	3	Client ID	(value)		(various)	

ClearingFirm (tag 439)	4	Clearing Firm	(value)		(various)	
ClearingAccount (tag 440)	4	Clearing Firm				(value)
SettlLocation (tag 166)	10	Settlement Location	CED = CEDEL DTC = Depository Trust Company EUR = Euroclear FED = Federal Book Entry PNY= Physical PTC= Participant Trust Company	C	Generally accepted market participant id	
			ISO Country Code (Local Market Settle Location)	E	ISO Country Code	

#### 4. Replaced Field Enumerations for Futures and Options for SecurityType (tag 167) with CFICode (tag 461) [Replaced in FIX 4.3]

The CFICode was introduced to improve granularity in specifying security type. The adoption of CFICode has made the values for futures and options in SecurityType (tag 167) redundant.

**The following Security Type values can be specified using CFICode via the following mapping table:**

Value Removed From SecurityType (tag 167)	CFICode (tag 461) value
---	-------------------------

“FUT”	Future	First position of CFICode = “F”
“OPT”	Option	First position of CFICode = “O”

## 5. Replaced Field: PutOrCall (tag 201) and UnderlyingPutOrCall (tag 315) with CFICode (tag 461) [Replaced in FIX 4.3]

The CFICode was introduced to improve granularity in specifying security type. The adoption of CFICode has made the PutOrCall (tag 201) redundant. The PutOrCall values are numeric and this has led to confusion on their usage as the data is not self describing. The CFICode uses a more readable format of “P” and “C” for put and call.

**PutOrCall values can be specified using CFICode via the following mapping table:**

Removed field PutOrCall (tag201) values		CFICode (tag 461) value
0	Put	First position of CFICode = “O” Second position of CFICode = “P”
1	Call	First position of CFICode = “O” Second position of CFICode = “C”

## 6. Replaced Field: CustomerOrFirm (tag 204) with OrderCapacity (tag 528) [Replaced in FIX 4.3]

The Rule80A (tag 47) and CustomerOrFirm (tag 204) values have been merged and generalized into the new OrderCapacity (tag 528) field. This was done to provide a more generalized approach to identifying order capacity across markets.

**CustomerOrFim values can be specified using OrderCapacity via the following mapping table:**

Removed Field CustomerOrFirm (tag 204) values		OrderCapacity (tag 528) value
0	Customer	A - Agency
1	Firm	P - Principal

## 7. Replaced values: OptAttribute (tag 206) with values in CFICode (tag 461) [Replaced in FIX 4.3]

The CFICode (tag 461) permits specification of the expiration style for options using more meaningful acronyms “A” for American and “E” for European. These values will replace the values currently used by some markets in the OptAttribute field. OptAttribute will still be used for versioning the option contract in the event of a corporate action, such as a split or merger, but will eliminate the problem when both the expiration style and a version number must be specified.

**Certain OptAttribute values can be specified using CFICode via the following mapping table:**

Values Removed From OptAttribute (tag 206)		CFICode (tag 461)
L	American	First Position “O” Second Position “C” or “P” Third Position “A” for American Style Expiration
S	European	First Position “O” Second Position “C” or “P” Third Position “E” for European Style Expiration

## **8. Replaced values: AllocTransType (tag 71) with values in AllocType (tag 626) [Replaced in FIX 4.3]**

The AllocTransType (tag 71) field specified both the type of "transaction": new, cancel, replace and the type or purpose of the Allocation message. A new field AllocType was introduced in FIX 4.3 which specifies the type or purpose of the Allocation message. Three fields were removed from AllocTransType and are now part of AllocType. In addition, AllocType supports additional values which were not defined in AllocTransType.

**Certain AllocTransType values can be specified using AllocType via the following mapping table:**

Values Removed From AllocTransType (tag 71)	AllocType (tag 626)
--	---------------------

1	<p>New</p> <p><b>(Note: "New" was dual-purpose:</b></p> <p><b>1) a new transaction</b></p> <p><b>(this meaning remains)</b></p> <p><b>2) buyside calculated allocation</b></p> <p><b>The buyside calculated allocation meaning has been replaced by AllocType="Buyside Calculated")</b></p>	1	Buyside Calculated (includes MiscFees and NetMoney)
3	Preliminary (without MiscFees and NetMoney)	2	Buyside Preliminary (without MiscFees and NetMoney)
4	Calculated (includes MiscFees and NetMoney)	3	Sellside Calculated Using Preliminary (includes MiscFees and NetMoney)
5	Calculated without Preliminary (sent unsolicited by broker, includes MiscFees and NetMoney)	4	Sellside Calculated Without Preliminary (sent unsolicited by sellside, includes MiscFees and NetMoney)

## 9. Replaced Field: RelatdSym (tag 46) with Symbol (tag 55) [Replaced in FIX 4.3]

The RelatdSym (tag 46) field used in the News and Email messages prior to FIX 4.3 has been replaced by the Symbol (tag 55) field thus allowing the News and Email messages to use the same <Instrument> component block as other FIX application messages.

## 10. Removed Deprecated Field: Benchmark (tag 219) [Deprecated in FIX 4.3, Removed in FIX 4.4]

*Affected Volume 3: field removed from Indication of Interest message.*

The Benchmark field introduced in FIX 4.2 was deprecated in FIX 4.3 by the combined use of BenchmarkCurveCurrency, BenchmarkCurveName, and BenchmarkCurvePoint fields. (see Volume 1, SpreadOrBenchmarkCurveData component block) **The Benchmark field was removed in FIX 4.4. Mapping of the replaced Benchmark field's values is as follows:**

Replaced Field Benchmark (219) Value		BenchmarkCurveC urrency (220)	BenchmarkCurveName (221)	BenchmarkCurvePoint (222)
1	CURVE	USD	Treasury	INTERPOLATED
2	5-YR	USD	Treasury	5Y
3	OLD-5	USD	Treasury	5Y-OLD
4	10-YR	USD	Treasury	10Y
5	OLD-10	USD	Treasury	10Y-OLD
6	30-YR	USD	Treasury	30Y
7	OLD-30	USD	Treasury	30Y-OLD
8	3-MO-LIBOR	USD	LIBOR	3M
9	6-MO-LIBOR	USD	LIBOR	6M

## 11. Removed Deprecated "On Close"-related Values for OrdType Field [Deprecated in FIX 4.3, Removed in FIX 4.4]

*Affected Volume 1: Glossary, Business Terms.*

*Affected Volume 6: values removed from OnClose field in Field Definitions.*

Three "on close"-related values in the OrdType field were deprecated in FIX 4.3 by the combined use of a new TimeInForce "At the Close" value and OrdType values. **These OrdType values were removed in FIX 4.4.** This makes "On close" handling consistent with "On open" (as a TimeInForce vs. OrdType). Note that CMS (e.g. used by NYSE) uses a TimeInForce for On Open (OPG) and an OrdType for On Close. FIX 4.3 implemented a consistent handling of the two vs. a continuation of following CMS-based semantics. **Mapping of the deprecated OrdType field's values is as follows:**

Replaced Value within OrdType field	TimeInForce (59)	OrdType (38)
--	------------------	--------------

5	Market on close	7	"At the Close"	1	"Market"
A	On close	7	"At the Close"	1	"Market"
B	Limit on close	7	"At the Close"	2	"Limit"

## 12. Removed Deprecated Field: Rule80A (tag 47) [Deprecated and Replaced in FIX 4.3, Removed in FIX 4.4]

*Affected Volume 4: field removed from New Order – Single, Order Cancel/Replace Request (aka Order Modification Request), and New Order List messages.*

The Rule80A field (known prior to FIX 4.2 as "Rule80A" and in FIX 4.2 as "Rule80A (aka OrderCapacity)") was deprecated and replaced in FIX 4.3 by the combined use of the new to FIX 4.3 OrderCapacity and Order Restrictions fields. **The Rule80A field was removed in FIX 4.4.** The "(aka OrderCapacity)" designation has been removed from the Rule80A field. **Mapping of the replaced Rule80A field's values is as follows:**

Replaced Field Rule80A (47) Value		OrderCapacity (528)		OrderRestrictions (529) Note datatype: MultipleValueString		Side (54)

### 13. Removed Deprecated Field: OnBehalfOfSendingTime (tag 370) [Deprecated and Replaced in FIX 4.3, Removed in FIX 4.4]

*Affected Volume 2: Message Routing Details – Third Party Message Routing, field removed from Standard Message Header.*

The OnBehalfOfSendingTime field introduced in FIX 4.2 was deprecated and replaced in FIX 4.3 by the use of HopSendingTime (tag 629) field which is part of the “Hops” repeating group. **The OnBehalfOfSendingTime field was removed in FIX 4.4.** See “Volume 2 – Standard Message Header” for HopSendingTime usage.

### 14. Removed three Deprecated "Forex - "-related Values for OrdType Field [Deprecated and Replaced in FIX 4.3, Removed in FIX 4.4]

*Affected Volume 1: Glossary, Business Terms.*

*Affected Volume 6: values removed from OrdType field in Field Definitions.*

Three "Forex - "-related values in the OrdType field were deprecated and replaced in FIX 4.3 by the combined use of a specifying Currency in the Product field and use of “regular” OrdType values. **These OrdType values were removed in FIX 4.4.** Mapping of the replaced OrdType field's values is as follows:

Replaced Value within OrdType field		Product (460)		OrdType (38)	
C	Forex - Market	4	"Currency"	1	"Market"
F	Forex – Limit	4	"Currency"	2	"Limit"
H	Forex Previously Quoted	4	"Currency"	D	"Previously Quoted"

### 15. Replaced value: "A = T+1" with value with "2 = Next Day (T+1)" in SettlmntTyp (tag 63) field [Replaced in FIX 4.4]

The value "A = T+1" was inadvertently added to the SettlmntType (tag 63) field in FIX 4.3, however, the FIX specification already specified "2 = Next Day" which is synonymous. FIX 4.4 removed the "A=T+1" value and added " (T+1)" suffix to the "Next Day" value for clarification.

## 16. Replaced "Fixed Peg to Local best bid or offer at time of order" value from ExecInst (tag 18) Field [Replaced in FIX 4.4]

See "Volume 4 - Order Handling Instructions – pegged orders". **Mapping of the removed ExecInst field's value is as follows:**

Replaced Value within ExecInst (18) field		PegMoveType (835)		PegScope (840)		ExecInst (18)	
T	Fixed Peg to Local best bid or offer at time of	1	Fixed	1	Local	R	Primary peg

## 17. Removed unused field: RatioQty (tag 319) [Replaced in FIX 4.4]

RatioQty (tag 319) was no longer used by any FIX messages as of FIX version 4.3 designating it as "No longer used as of FIX 4.3". Note that FIX 4.3 replaced this field with LegRatioQty (tag 623).

## 18. Removed unused field: SecDefStatus (tag 653) [Replaced in FIX 4.4]

SecDefStatus (653) was no longer used by any FIX messages as of FIX version 4.3 designating it as "No longer used as of FIX 4.3". Note that the FIX 4.3 draft process introduced this field, however, it was replaced with Security Definition messages prior to FIX 4.3 release.

## 19. Removed TotalVolumeTradedDate (tag 449) and TotalVolumeTradedTime (tag 450) fields [Replaced in FIX 4.4]

Removed TotalVolumeTradedDate (449) and TotalVolumeTradedTime (450) fields as FIX 4.4 specifies that MDEntryDate (272) and MDEntryTime (273) fields should be used instead.

## 20. Removed various Settlement Instructions-related fields [Replaced in FIX 4.4]

Removed the following Settlement Instructions-related fields: SecuritySettlAgentName, SecuritySettlAgentCode, SecuritySettlAgentAcctNum, SecuritySettlAgentAcctName, SecuritySettlAgentContactName, SecuritySettlAgentContactPhone, CashSettlAgentName, CashSettlAgentCode, CashSettlAgentAcctNum, CashSettlAgentAcctName, CashSettlAgentContactName, CashSettlAgentContactPhone replacing them with <SettlParties> (consistent with SI change made between ISO 7775 and ISO 15022). Removed SettlDepositoryCode (173), SettlBrkrCode (174), and SettlInstCode (175) fields. Refer to "Volume 5 - Settlement Instruction Fields Usage Matrix" for further details.

**21. Removed "Default", "Specific Allocation Account Overriding", and "Specific Allocation Account Standing" values from SettlInstMode (tag 160) field [Replaced in FIX 4.4]**

Refer to "Volume 5 - Settlement Instruction Fields Usage Matrix" for further details.

**22. Removed several values from AllocType (tag 626) field [Replaced in FIX 4.4]**

Removed values: "Sellside Calculated Using Preliminary (includes MiscFees and NetMoney)", "Sellside Calculated Without Preliminary (sent unsolicited by sellside, includes MiscFees and NetMoney)", and "Buyside Ready-To-Book - Combined Set of Orders". Renamed value "Buyside Ready-To-Book - Single Order" to "Buyside Ready-To-Book" in FIX 4.4.

**23. Removed several values from YieldType (tag 235) field [Replaced in FIX 4.4]**

Removing the following values from the YieldType field: "AVGLIFE = Yield To Average Life", "LONGEST = Yield to Longest Average (Sinking Fund Bonds)", and "SHORTEST = Yield to Shortest Average (Sinking Fund Bonds)" keeping "LONGAVGLIFE " and "SHORTAVGLIFE" values.

### Use of <Parties> Component Block: PartyRole, PartyIDSource, PartyID, and PartySubID

The <Parties> "component block" (see "Volume 1: Common Components of Application Messages") is a flexible mechanism used to allow new "roles" or types of firm identification to be specified without a corresponding increase in the number of FIX fields. What previously would have required at least one a new field to many messages for each new "role" can now be supported via an additional value to the PartyRole field. In addition, the <Parties> component block makes it possible to identify the "source" or type of value (e.g. "BIC" code) you are specifying via the PartyIDSource field. The PartyID field contains the actual value and a repeating group of PartySubID and PartySubIDType fields may be optionally used to provide an additional level of subdivision. The PartySubIDType field can be used to identify the type of PartySubID value (i.e. "Firm", "Phone number", "Contact name", "Full legal name of firm", etc.)

The matrix below identifies the various PartyRole values and the anticipated PartyIDSource values which may be associated with each PartyRole. It is important to note that **other combinations may exist**. In addition, see "Volume 7 – Products" for any documented product-specific anticipated PartyRole mapping and guidance.

## Appendix 6-H

### Use of <SettlInstructions> Component Block

#### Introduction

The SettlInstructions component block is used to transmit settlement instruction details on an Allocation Instruction, Allocation Report, Confirmation or Settlement Instruction message.

- When used on an Allocation Instruction, Allocation Report or Confirmation message, this represents the settlement instructions that apply to a particular trade or order.
- When used on a Settlement Instruction message, this represents either standing instructions (to be used on future trades) or the instructions for a specific order (this usage is intended for the retail CIV market).

This component block can be used either to contain full settlement instruction details (i.e. settlement agent identities and account numbers) or a reference to a standing instruction database.

- When used to refer to instructions held on a standing instructions database, the StandInstDbType, StandInstDbName and StandInstDbID fields are used to specify the identify and name of the standing instructions database, and the identifier of the standing instruction record within that database. The NoDlvyInst repeating group should not be populated when using these fields.
- When used to specify settlement instruction details, the NoDlvyInst repeating group is used. Each member of that group holds one party's instructions for cash or securities settlement (or both in the case of DVP). The SettlInstSource field identifies to whom the instructions belong, and the DlvyInstType field identifies whether the instructions are for securities or for cash.
- In both of these cases, the SettlDeliveryType field is used to identify the type of settlement being represented by these settlement instructions, i.e. DVP (delivery vs payment), FOP (free of payment), hold in custody etc.

Where the component block is used to describe specific settlement instructions (i.e. using the NoDlvyInst repeating group), the number of entries in the NoDlvyInst repeating group is determined by the contents of the SettlDeliveryType field and the context of the message block (i.e. which message it is in). When used in an Allocation Instruction, Allocation Report or Settlement Instruction message, only the settlement instructions for the party generating the message need be specified. On a Confirmation message, both parties to the trade will have their settlement instructions specified. The matrix of usage of the NoDlvyInst repeating group is therefore as follows:

#### Allocation Instruction, Allocation Report or Settlement Instruction

SettlDeliveryType	NoDlvyInst	SettlInstSource	DlvyInstType
0 – Versus Payment	1	1 (broker's), 2 (institution's) or 3 (investor's), depending on the identify of the originator of the message	S – securities
1 – Free	2	1 (broker's), 2 (institution's) or 3 (investor's), depending on the identify of the originator of	S – securities

		the message	
		1 (broker's), 2 (institution's) or 3 (investor's), depending on the identify of the originator of the message	C – cash

**Confirmation**

SettlDeliveryType	NoDlvyInst	SettlInstSource	DlvyInstType
0 – Versus Payment	2	1 (broker's)	S – securities
		2 (institution's)	S – securities
1 – Free	4	1 (broker's)	S – securities
		1 (broker's)	C – cash
		2 (institution's)	S – securities
		2 (institution's)	C – cash

The actual instructions themselves are held within the SettlParties component block inside the NoDlvyInst repeating group. This contains a repeating group of party identifiers and sub ids which is used to hold the identifiers of all parties involved in settlement (e.g. agent, custodian, depository) together with any required account numbers, registration details or similar.

**Delivery Instruction Formatting & Structure****Parties & Party Sub-IDs**

FIX supports the concept of a “SettlParty”, this being an organisation or individual connected in some way to the settlement of a financial transaction. Every SettlParty has a role (defining what the SettlParty is doing), an identifier, SettlPartyID (with a SettlPartyIDSource to identify the type of SettlPartyID) and any number of sub-identifiers (SettlPartySubID), each with a SettlPartySubIDType to define the type of sub-identifier.

For the purposes of settlement instruction definition, the party sub-identifiers can be taken to represent one of three things:

- An alternative identifier for the SettlParty. For example, if the SettlParty’s primary identifier is its BIC (expressed through its SettlPartyID with SettlPartyIDSource = B for BIC) then any other identifiers for the SettlParty (e.g. CSD participant number) can be expressed using a

SettlPartySubID. For every SettlPartyIDSource that is commonly used to identify a SettlParty for settlement purposes, there is an equivalent SettlPartySubIDType.

- An identifier of an account held at the SettlParty. Note that the convention is to hold the account details under the SettlParty at which the account is held, rather than under the SettlParty on whose behalf the account is held. For example, the account number of a custodian at an agent is held as a SettlPartySubID under the SettlParty representing the agent, not the custodian.
- Additional information relating to the SettlParty, e.g. its full name, address, contact name, phone number etc.

When using the FIX SettlInstructions component block, it may be appropriate to provide a number of identifiers for the same SettlParty (e.g. both the BIC and CREST id for a CREST member agent bank). Only one of these can be held as a SettlPartyID – the other(s) must be held as SettlPartySubID(s). It does not matter which is held where.

### Mapping FIX to ISO15022

It is important to note that the ISO15022 standard has a consistent set of codes for what in FIX terms would be called the SettlPartyIDSource (or SettlPartySubIDType for sub-identifiers). Examples include:

- C – Country code
- P – Qualifier (BIC/BEI)
- R – Data Source Scheme/Proprietary Code
- Q – Name and address
- S – Alternate ID

In the interests of assuring STP, FIX fields and messages only map to ISO15022 options C, P or R (with a strong preference for P - BIC wherever possible). There is no equivalent of 'Q' in FIX at the SettlParty level, though this is supported at SettlPartySubID level.

The ISO 15022 standard uses a similar methodology to the component blocks in FIX. This means that the same ISO tag can be used many times in the same message but its meaning depends on which message 'sequence' it is in. This is equivalent to the FIX concept of SettlPartyRole. For example, a PSET BIC should be represented in FIX using these tags:

FIX Tag	Value
782 SettlPartyID	CEDELULL
783 SettlPartyIDSource	B
784 SettlPartyIDRole	10

The mapping to a SWIFT tag would work here as follows:

1. FIX tag 782 is a SettlPartyID and therefore maps to SWIFT tag 95 (Party)
2. FIX tag 783 shows that the SettlPartyIDSource is a BIC and therefore maps to SWIFT option P.

We can now derive the correct SWIFT tag as 95P, which takes the format **:Tag::Qualifier//BIC**, or in SWIFT shorthand **::4!c//4!a2!a2!c[3!c]** (where [3!c] represents the XXX characters at the end of an 8-character BIC). So, concatenating the values within, or implied by, the FIX tags the mapping is:

**782 & 783::& 784 & //& 782**, or in the final message, **:95P::PSET//CEDELULL**

### Notes on CSD Identifiers

ISO15022 allows a CSD identifier to be specified along with the type of identifier being used. For example:

**:95R::DEAG/CRST/636** - Tag(Option):: (Qualifier)/(Data Source Scheme)/(Proprietary Code)

Here, the various tags have the following meanings:

- 95 (Tag) = PARTY
- R (Option) = The party will be identified by a data source scheme/ proprietary code
- DEAG (Qualifier) = Deliverer's agent
- CRST (Data Source Scheme) = Crest
- 636 (Proprietary Code) = participant ID at Crest.

In order to avoid having the full set of CSD identifier types listed as separate enumerations of PartyIDSource/PartySubIDType, FIX treats all such identifiers simply as CSD participant/member codes (PartyIDSource = H, PartySubIDType = 17). The type of participant/member code (e.g. Euroclear vs. DTC vs. CREST etc.) can be derived simply by looking at the instruction's settlement location (PartyRole = 10 – equivalent to ISO15022 PSET). This is illustrated in the example below.

Settlement instructions for German domestic settlement with Citibank Frankfurt as local agent, into account 11921500:

<SettlParties>				
Tag	Field Name		Value	Comments
781	NoSettlPartyIDs		3	
→	782	SettlPartyID	DAKVDEFF	PSET for German domestic settlement
→	783	SettlPartyIDSource	B	BIC is used as the identifier in 782
→	784	SettlPartyRole	10	Settlement location (PSET)
→	782	SettlPartyID	7671	Broker's agent's Kassenverein number
→	783	SettlPartyIDSource	H	CSD participant/member code (e.g. Euroclear, DTC, CREST or Kassenverein number) As the settlement location here is 'German domestic', this identifier is therefore a Kassenverein number

→	784	<i>SettlPartyRole</i>		30	Agent – maps to SWIFT DEAG or REAG (depending on Side)
→	801	<i>NoSettlPartySubIDs</i>		1	
→	→	785	<i>SettlPartySubID</i>	CITIDEFF	This agent's BIC This is held here as a PartySubID, though could also have been held as the PartyID with the Kassenverein number held as PartySubID instead
→	→	786	<i>SettlPartySubID Type</i>	16	BIC
→	782	<i>SettlPartyID</i>		9427	Broker or broker's custodian's Kassenverein number
→	783	<i>SettlPartyIDSource</i>		H	CSD participant/member code (e.g. Euroclear, DTC, CREST or Kassenverein number) (KV no. in this case) As the settlement location here is 'German domestic', this identifier is therefore a Kassenverein number
→	784	<i>SettlPartyRole</i>		27 (client) or 28 (custodian)	Deliverer/receiver of securities (or custodian) – maps to SWIFT DECU or RECU (depending on Side)
→	801	<i>NoSettlPartySubIDs</i>		1	
→	→	785	<i>SettlPartySubID</i>	11921500	Securities account number
→	→	786	<i>SettlPartySubID Type</i>	10	Securities Account – maps to ISO15022 Tag 97 SAFE (Safekeeping account)
</SettlParties>

:16R:FIAC :36B::SETT//UNIT/3000, :97A::SAFE//11921500 :16S:FIAC	Securities account number (taken from third SettlParty in the table above).
:16R:SETDET	
:22F::SETR//TRAD	
:16R:SETPRTY :95R::DEAG/DAKV/7671 :16S:SETPRTY	Agent – the second SettlParty in the table above. The DAKV identifies the number 7671 as being a Kassenverein number and is derived from a combination of this party's SettlPartyIDSource (H - CSD code) and the SettlPartyID of the settlement agent.
:16R:SETPRTY :95P:PSET//DAKVDEFF :16S:SETPRTY	Settlement location – the first SettlParty in the table above.
:16R:SETPRTY :95R::SELL/DAKV/9427 :16S:SETPRTY	Custodian/client – the third SettlParty in the table above.
:16R:AMT :19A::SETT//EUR50700, :16S:AMT	
:16S:SETDET	

### Registration Details & Investor IDs

Where registration details (e.g. a broker or agent's registration number or name) needs to be specified as part of a settlement instruction, this can be done as a SettlPartySubID with SettlPartySubIDType of 11 (registration number) or 14 (registration name) as appropriate. Investor IDs are represented by a completely separate SettlParty with a SettlPartyRole of 5 (investor id).

### Notes on use of Settlement Location (PSET) and Trade Matching

One of the strengths of the FIX 4.4 post-execution process is the ability to enrich messages with PSET or full settlement details. This will allow brokers to match the buy-side's PSET for "settlement channel compatibility" prior to the confirmation process. Brokers will compare the PSET on the buy-side's Allocation Instruction with their default PSET for the security in question and, if the match is not exact, they will use their own proprietary logic to determine whether or not to support a "bridge" between the 2 PSETs. All participants are strongly encouraged to use the BIC for sending PSET information. This matching logic closely mimics that proposed by the GSTPA model and has the advantage of alerting parties to potential settlement issues well before instructions are sent to the market. For similar reasons, buy-side firms are encouraged to include net money calculations on their allocations.

### Notes on Relational Integrity and Compatibility with ISO15022

The FIX 4.4 post-execution messages have been designed to be compatible with the ISO15022 standard. To ensure that all parties can translate a FIX message into a SWIFT message without ambiguity, it is essential that the information on Allocation Instructions and Confirmations conforms to certain relational integrity rules. This is particularly applicable to the data within the component blocks. The ability to use these blocks to define any number of parties gives considerable flexibility, but there are certain pitfalls. The same *SettlPartyIDRole* should never repeat within the same <SettlParties> block. For example, this slightly contrived combination would be allowed because even though the values in *SettlPartyID* and *SettlPartyIDSource* are identical, the values of tag 784 (784=30 and 783=27) are unique.

<SettlParties>				
Tag	Field Name		Value	Comments
781	NoSettlPartyIDs		2	
→	782	<i>SettlPartyID</i>	CITIGB21XXX	
→	783	<i>SettlPartyIDSource</i>	<b>B</b>	BIC
→	784	<i>SettlPartyRole</i>	<b>30</b>	Agent
→	782	<i>SettlPartyID</i>	CITIGB21XXX	
→	783	<i>SettlPartyIDSource</i>	<b>B</b>	BIC
→	784	<i>SettlPartyRole</i>	<b>27</b>	Buyer/Seller (receiver/deliverer)
</SettlParties>				

However, this equally contrived combination would not be allowed because the values in *SettlPartyRole* are identical (784= 4 and 784=4) even though the BICs are different.
